For Instant Use

When the induction sensor detects the sensor sensor, the water will start to flow immediately. The water will stop automatically after 30 seconds to avoid the water dripping.

Infrared Induction Sensor

In daily life, it is hard to avoid germs and bacteria. Washing our hands after eating, shopping, and other activities is very important. Infrared induction sensor can help us to avoid germs and bacteria. It can help us to avoid germs and bacteria. It can help us to avoid germs and bacteria.

For Long-term Use

When the induction sensor detects the sensor sensor, the water will start to flow immediately. The water will stop automatically after 30 seconds to avoid the water dripping.

A work of art with quality

The main function of hand cream is similar to that of skin cream, and it is a combination for the purpose of tenderizing skin, especially the outermost stratum corneum, with moderate moisture. Its characteristic is that it can not only keep the balance of skin moisture, but also supplement important oily ingredients, hyaluronic moisturizing ingredients and moisture, and can be used as the carrier of active ingredients and medicines to be absorbed by the skin, so as to achieve the purpose of conditioning and nourishing the skin.

Grease Trap ABS
34X43X33

PORTABLE GREASE TRAP

Penjelasan :

Grease Trap (Lemak) dari dapur adalah salah satu limbah domestik yang tidak bisa diura secara alami. Sumber Grease adalah dari Minyak, Lemak, Mentega, Susu, Keju, Daging, dll.

Jika limbah grease ini tidak ditangani secara tepat, akan menyebabkan :

1. Saluran pipa akan terhambat oleh grease yang membeku.
2. Jika sampai keluar ke saluran kota, akan menyebabkan bau yang tidak sedap (pencemaran), dan dapat menimbulkan penyakit.
3. Jika sampai masuk ke badan sungai, akan mengganggu proses sepele, bank.

Untuk menghindari Grease ini, salah satunya dengan cara memasang Grease Trap Portable (Perangkap Lemak). Grease Trap Portable ini dipasang dibawah Sink Dapur.

Cara kerja :

Setelah air cucian dari dapur melalui Sink, akan mengalir masuk ke dalam Grease Trap Portable. Sampah-pisah buangan akan tertinggal pada Basket Strainer Ø 2mm, setelah melalui basket, air + grease masuk ke ruang 2. Grease akan naik ke permukaan air secara gravitasi karena berat jenis grease lebih ringan dari pada air. Kemudian air yang berada dibawah grease akan keluar melalui pipa ke saluran kota. Sampah-sampah pada basket dan grease yang ada dipermukaan air harus dibersihkan secara berkala.

Dimensi	34 X 43 X 33 (mm)
Materi	Poly Propylene (PP Plastic)
Pipa & fitting	PVC Ø 1 1/2"
Basket	Poly Propylene (PP Plastic)
